ATHENS — GREECE

ATTENTION

- Arm the speargun only into the Water not on land or on the boat.
- Do not leave the speargun armed on land or on the boat.
- Do not point it towards people even if it is not armed.
- For the correct operation of pulleys the periodic use of sea grease in the bearings extends their lifetime.

Directions of Use

After the first use of the speargun we notice that the tires have decreased their power. So we advise you to improve the power of rubbers by following the steps:

1. Unload the rubbers from the pretension hooks.
2. Pull the wishbone to the last shark fin picture: (1)
3. The Nano pulleys must have distance from the stopper about 3-4cm fin picture: (2)
4. To reduce the ropes at the right distance make a knot at this point picture: (3)
